

Generative AI Solutions

Step outside the hype cycle with generative AI built with business in mind. Altair® RapidMiner®'s generative AI tool puts access to hundreds of thousands of large language models (LLMs) at users' fingertips. Our versatile and customizable extension offers a secure, cost-effective, and easy-to-use way to leverage generative AI's capabilities.

See for yourself with our explainer: [Three Clicks to Generative AI](#).

[Watch Video](#)

Our generative AI extension connects Altair RapidMiner users with over 450,000 open-source LLMs on Hugging Face. The extension also has access to public versions of the biggest models on the market, like ChatGPT. Pick from pre-trained models for specific tasks or go for the biggest on the block. Altair RapidMiner can do both, and more, without users needing to code.

More Accurate Results with Fewer Hallucinations

The Altair RapidMiner extension supports retrieval-augmented generation (RAG), a below-the-surface process that limits the model's frame of reference to real and vetted information. RAG adds context to queries that increase the accuracy of the result and reduces the likelihood of AI “hallucinating.” Get results you can trust with our generative AI tool.
